Story 5

Maxfield Raynolds

Data 608

Spring 2026

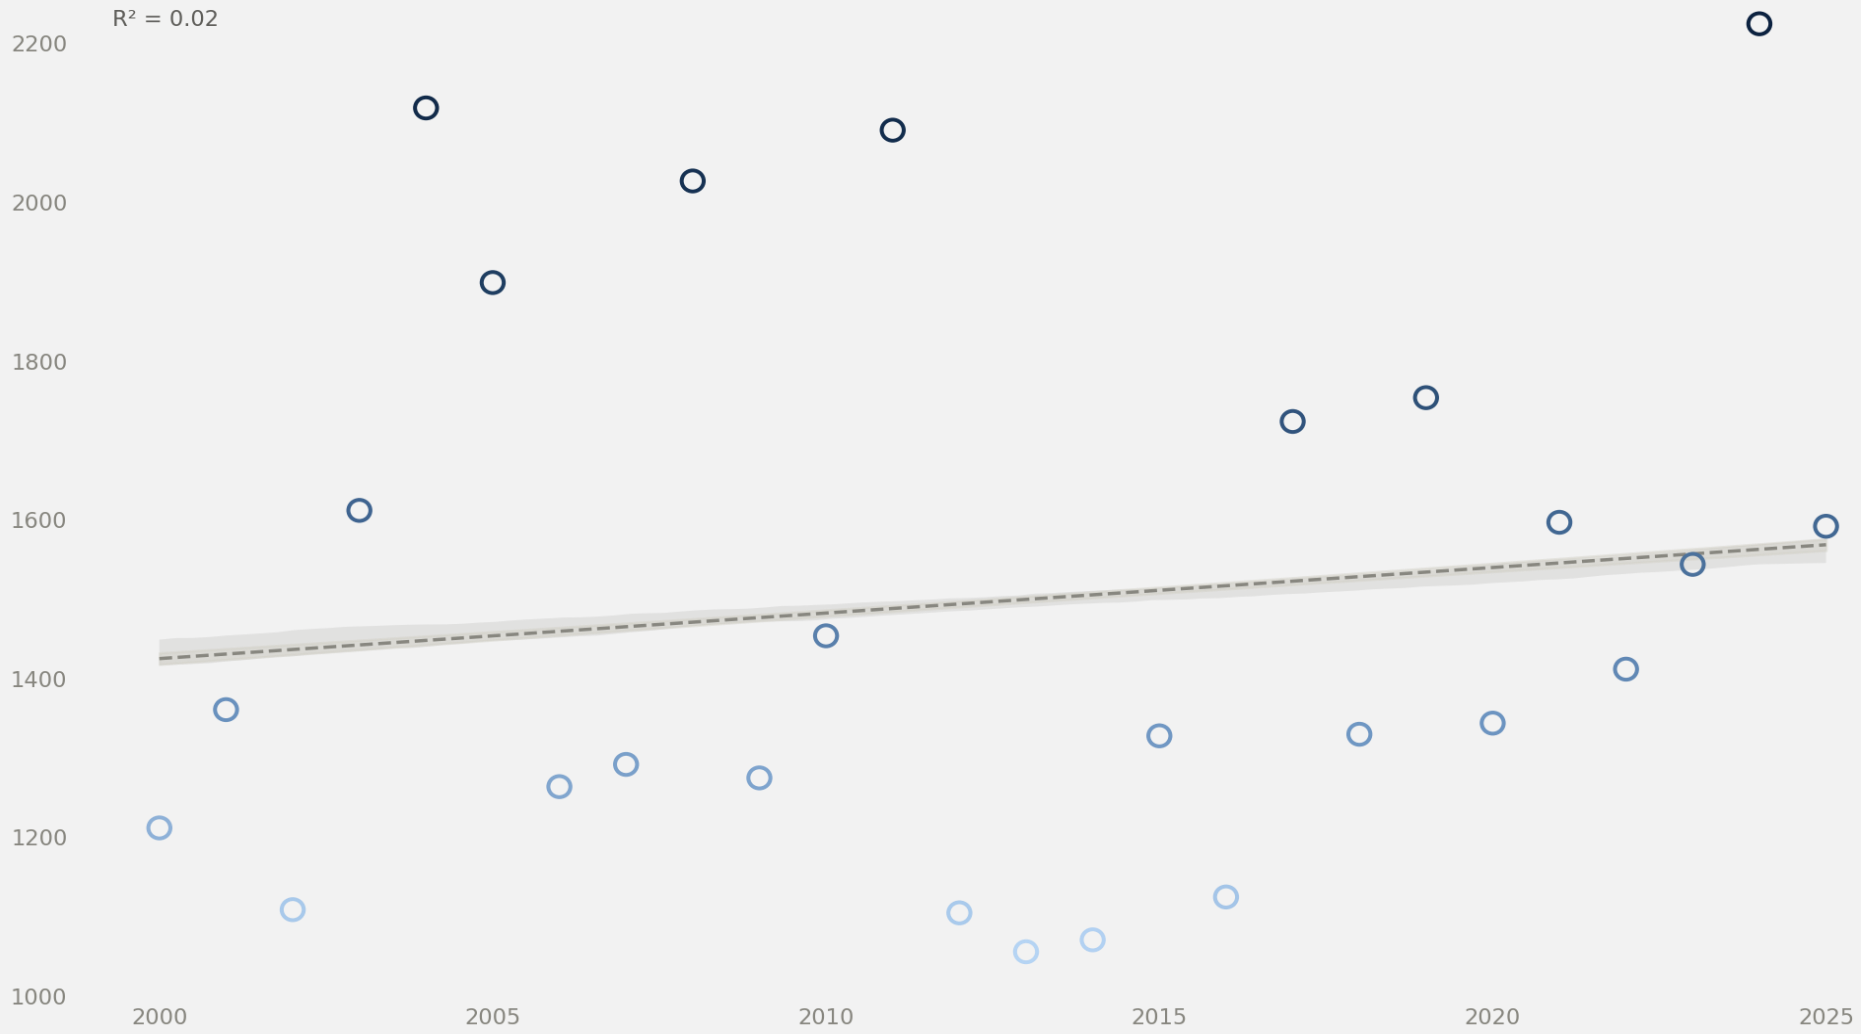
Focus: Story Telling/Narrative Construction

Hurricane Katrina
2005
Deaths: 1392
Damage: $125 Billion

Hurricane Sandy
2012
Deaths: 254
Damage: $98 Billion

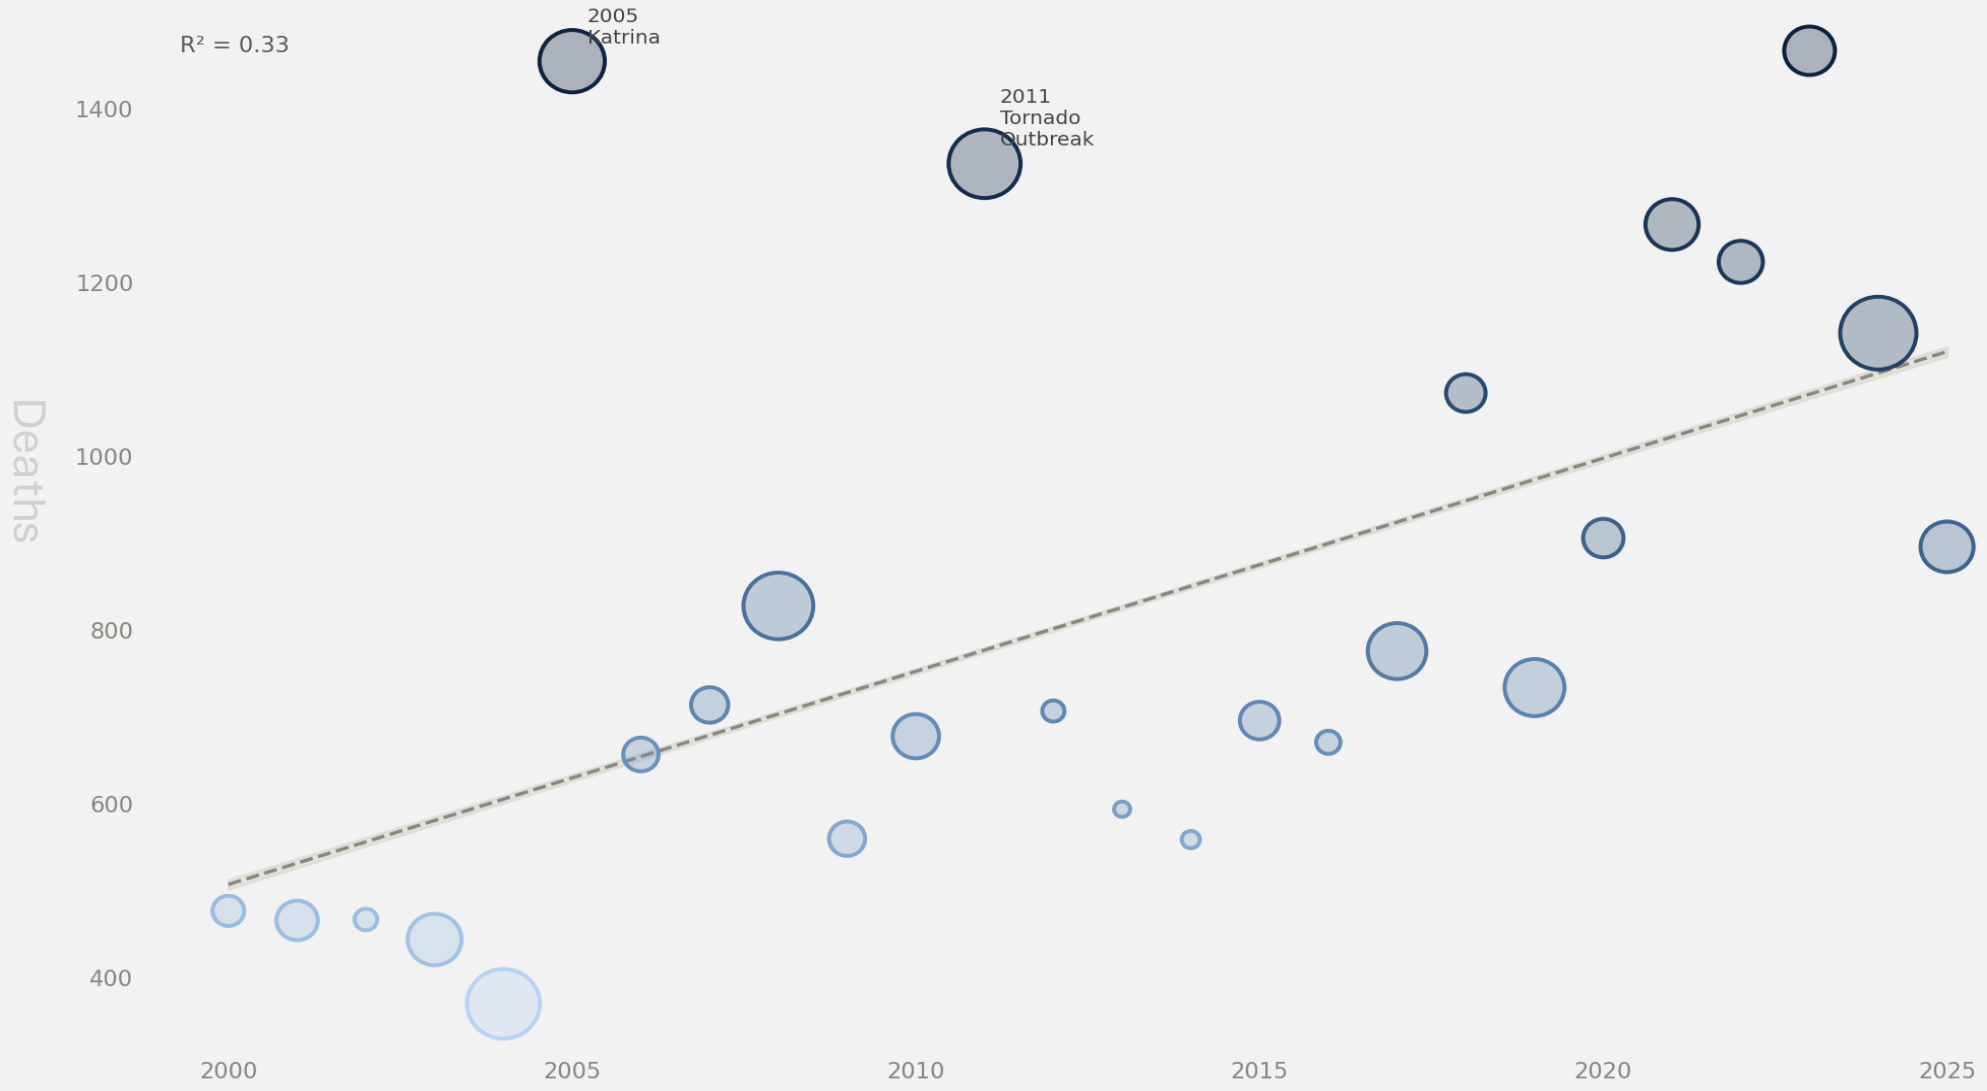
Hurricane Maria
2017
Deaths: 3,059
Damage: $92 Billion

In the US, over the last 25 years, the number of **major storms are increasing**...



Source: NOAA Climate Data

...and those **storms are increasingly deadly**...



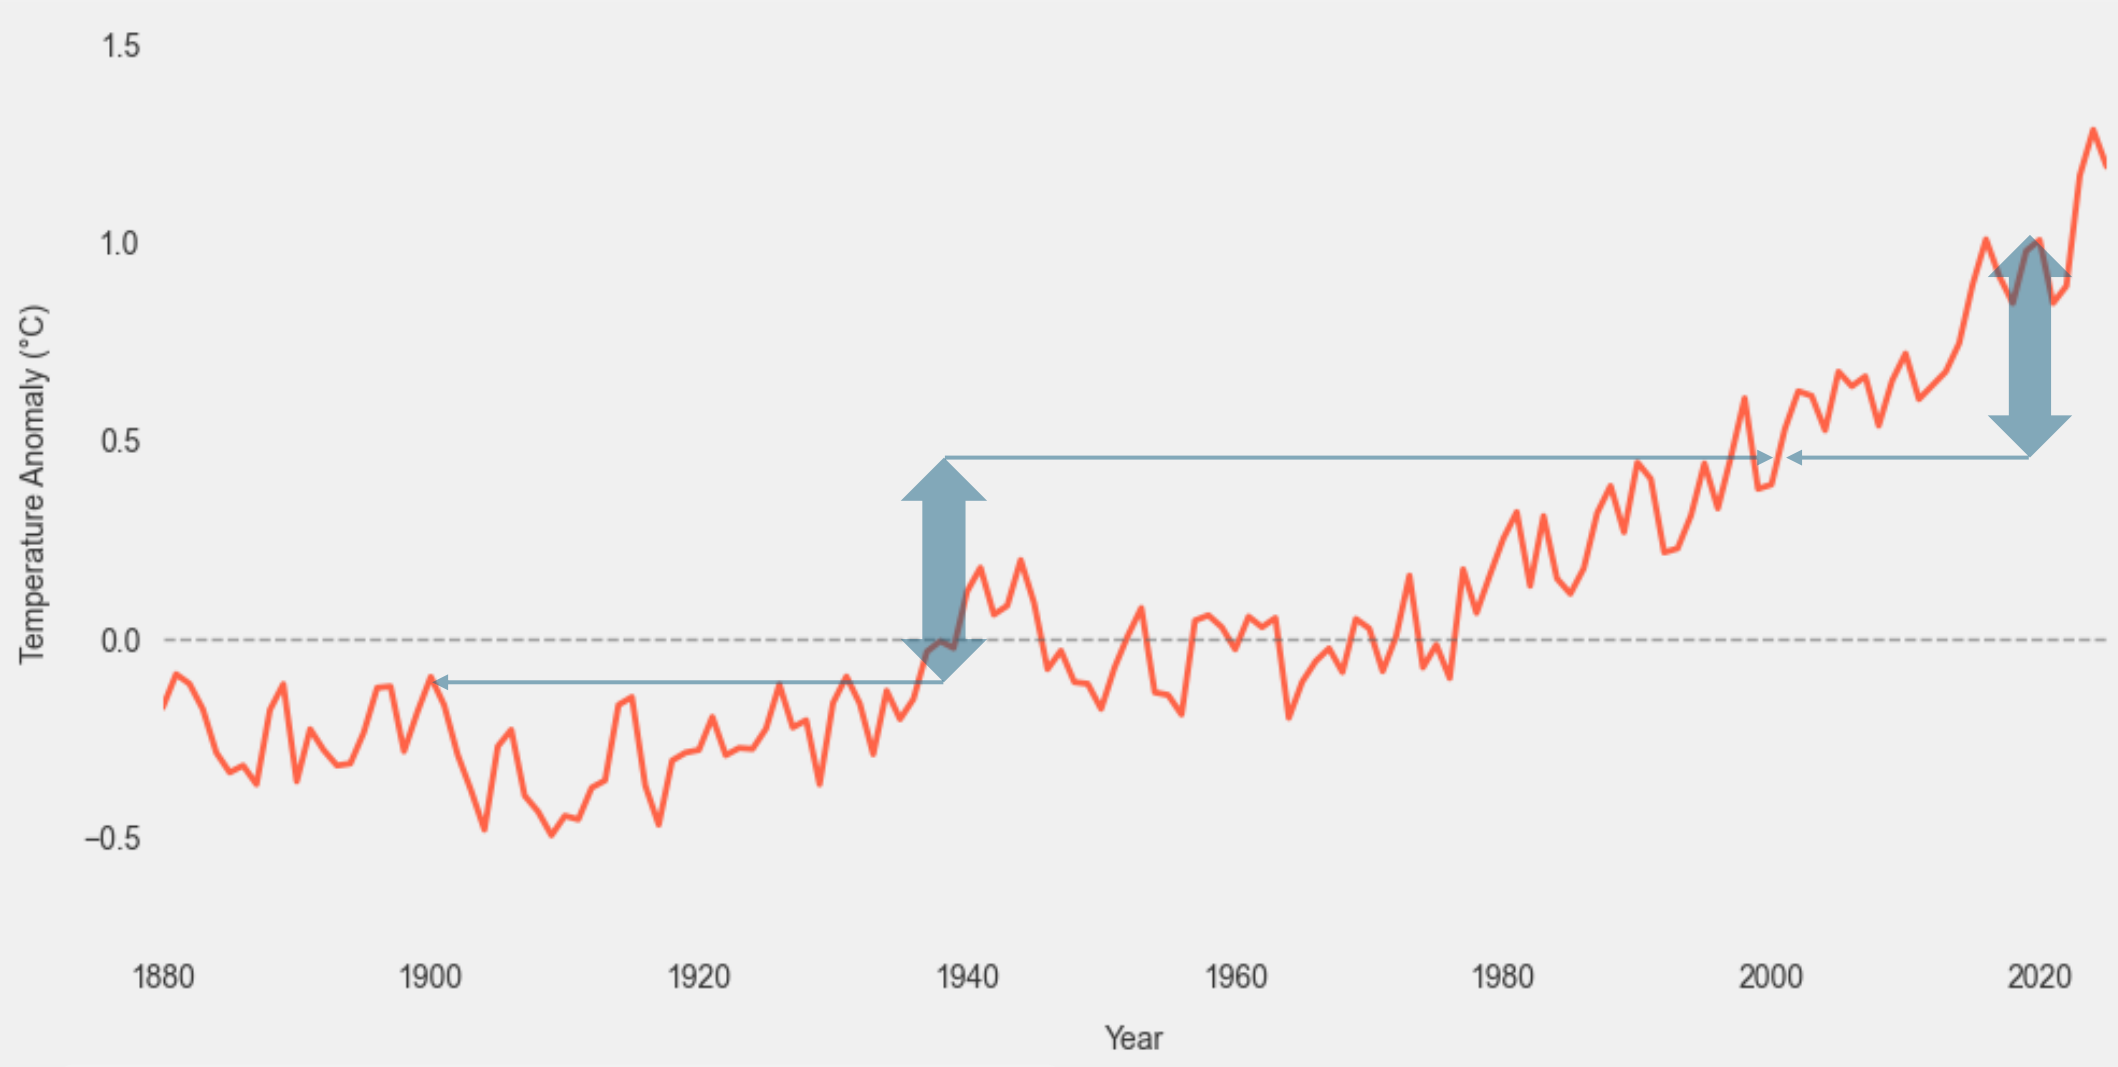
Source: NOAA Climate Data

...but why?...
...What else is occurring while storms are on the rise?

Over the last 140 years the temperature anomaly has steadily increased...

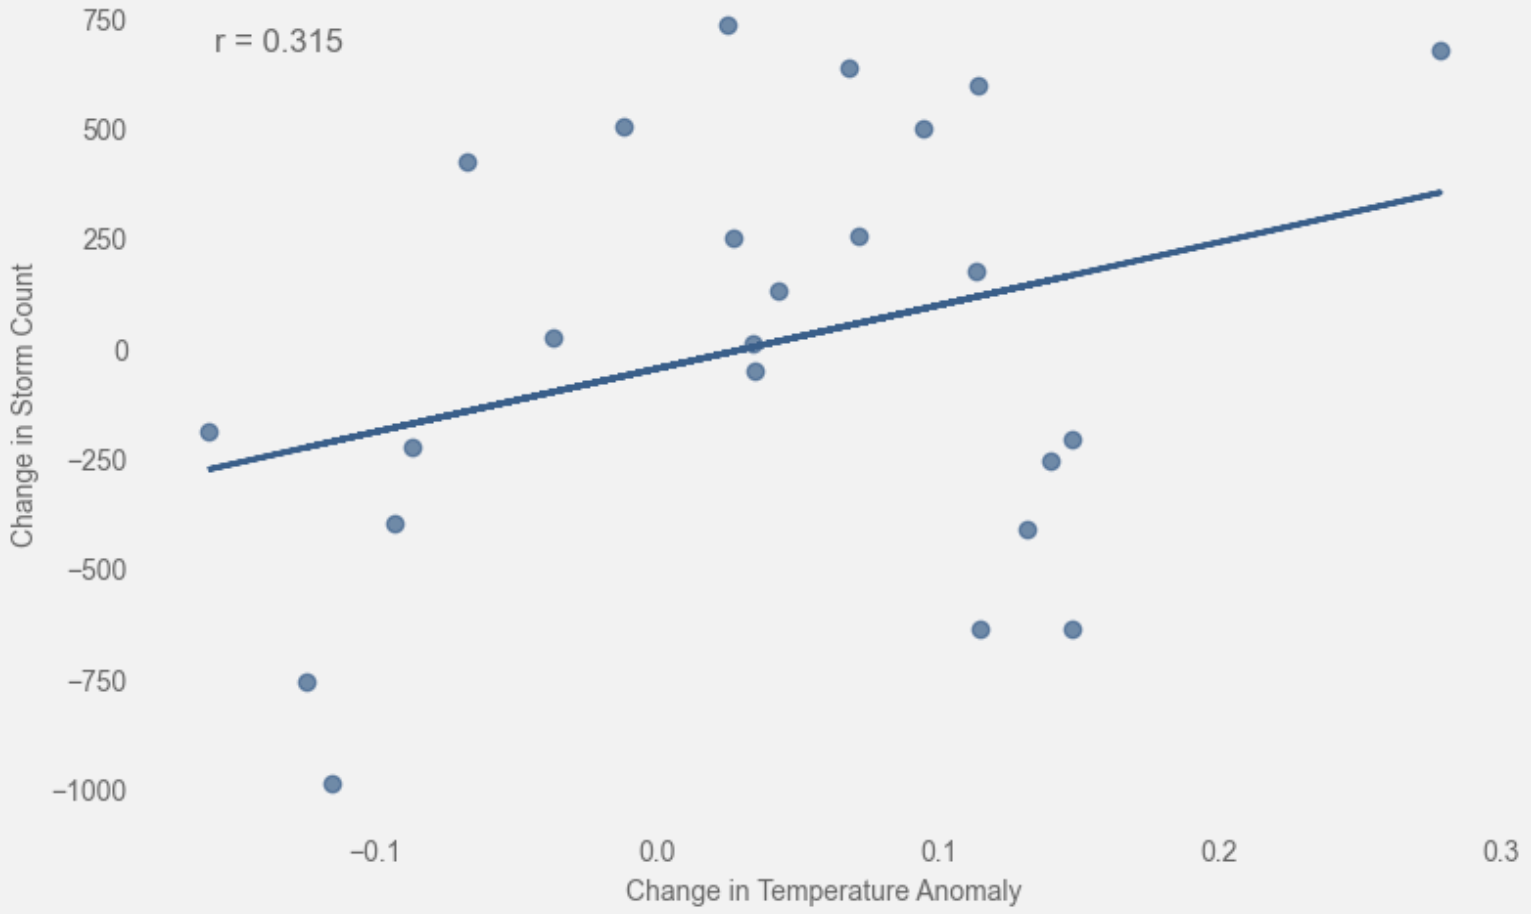
Source: NOAA Climate Data

…*Temperature anomaly* **increased the same amount in the previous 100 years as the last 20**.



Source: NOAA Climate Data

The temperature increase and the number of storms have a moderate to weak positive correlation...**Temperature and the number of storms are both increasing.**



While this does not indicate causation, it does indicate a phenomenon worthy of more research.
